JUN 19 1998

**Comments:**

- ① Farm Bureau feels on-site storage is essential for increased water supply for future populations, and for insurance in "lean" water years.
  - ② Landowners must maintain their water rights and quantity needed.
  - ③ Ground water pumping is NOT a solution, no one can predict the outcome of pumping on various land masses.
  - ④ Equitable payment structure. Those that need this extra water should pay for it. Agriculture isn't asking for anything, we're fine with the amount of current water supply.
  - ⑤ Don't fallow ag. land, if we need more water due to an increase in population we'll need more food - this means land.
- Use additional sheets if necessary.
